

OFFER OF SERVICES

Document control for plant construction

Documents and their contents form an essential basis for planning, approval, production, installation and operation of plants. Here the contents of the documents must fulfil the relevant purpose and be sufficiently up to date. Historical reproducibility must also be guaranteed as well as traceability for the inspection and approval processes.

**With our experience and our knowledge:**

- We support your planning teams in the assembly of plant documentation to satisfy requirements
- We create lasting and transparent document management solutions with multi-project capability
- You maintain quality in documentation processing permanently
- You obtain integrated solutions that satisfy engineering, business management and legal aspects
- The special quality and safety requirements for nuclear plant construction are taken into account comprehensively
- We verify the integrity of document contents for CAD models and on other data inventories

OFFER OF SERVICES
DOCUMENT CONTROL FOR PLANT CONSTRUCTION

YOUR SITUATION

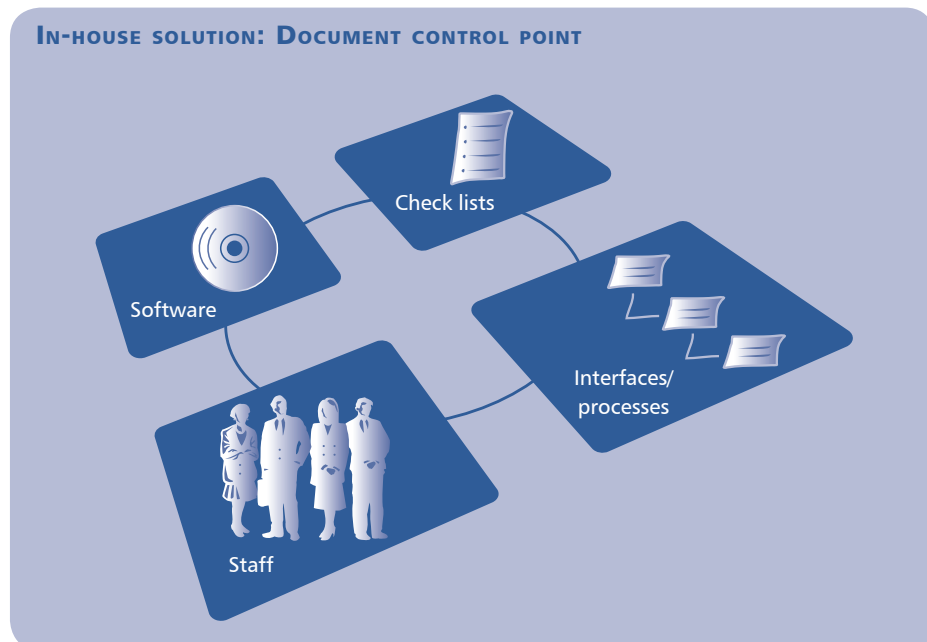

- Your company is active as plant planning engineer or erector and generates a large number of documents that have to pass through inspection and approval stages and have to be agreed with customers and inspection authorities.
- As prefabricator or installation company you receive documents from general contractors or other upstream companies. You must administer these documents, keep them up to date and prepare them for prefabrication or installation.
- As operator you receive in widely differing planning and erection phases documents the completeness and contents of which you want to verify.
- As operator you want not only up-to-date paper documentation but to download CAD data, for instance, to your own IT systems and to use this data for operating the plant.

OUR SOLUTIONS FOR YOUR SUCCESS

Concept – We support you in the design of your document management solution for planning, erection or operation of power supply plants. Here we work closely together with your engineering departments.

Process and interface design – Jointly with your engineering teams, project management and if necessary your external partners, we implement document production and document administration processes. Together with those involved, we develop solutions for process, logistic and IT interfaces satisfying all requirements.

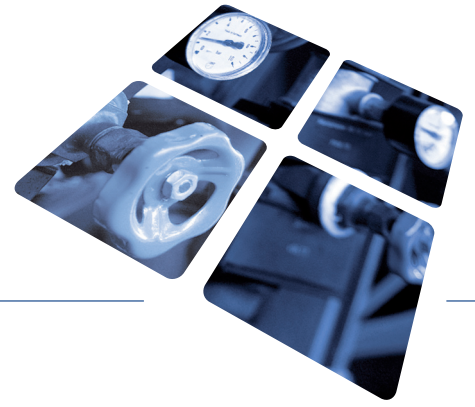

In-house solutions – To relieve or supplement your resources, we operate document control points for the preparation, administration and distribution of documents. Apart from our qualified staff, we provide the entire hardware and software infrastructure required. The software developed by us supports you in the verification, administration and distribution of documents and represents an important connecting link between existing IT applications.

EXAMPLES OF COMPLETED PROJECTS

- Concept for processing documentation for nuclear and conventional power station construction
- Operation of a document control point as in-house solution for the planning engineers and erectors of nuclear power stations
- Taking over and developing operating documentation for the operators of nuclear and conventional power stations
- Taking over and developing operating documentation for a pipeline operator

YOUR SERVICE PROVIDER

Within the KOMKE group of companies the KOMKE Engineering & Services GmbH & Co. KG understands itself as full-service supplier of engineering services for the energy industry and power plant construction.

The KOMKE group of companies offers its customers an all-embracing range of services from conceptual advice through implementation up to operation.
